Cox Expands Prosight Platform, Showcases Entire Portfolio of Healthcare Solutions at HIMSS22

Cox Prosight now features hand hygiene monitoring capabilities powered by real-time location services and Iot

ATLANTA and ORLANDO, March 14, 2022 – Cox Communications today announced the addition of hand hygiene monitoring capabilities to its real-time location services (RTLS) platform Cox Prosight.

According to the Center for Transforming Healthcare, 2 million patients contract healthcare-associated Infections (HAIs) every year and 99,000 succumb to the infection. Cox Prosight's hand hygiene monitoring capabilities enable hospitals to observe hand hygiene events to the latest Joint Commission and Leapfrog standards and help reduce preventable healthcare-associated infections.

Each sanitizer dispenser facility-wide is equipped with a sensor that transmits real-time data into a dashboard. This enables users to monitor the overall number of hand hygiene opportunities throughout a facility and compliance by staff group, job role, individual employee, department and shift. It's designed to enable the infection prevention team in hospitals to meet stringent Leap frog requirements.

Hand hygiene is just one way Cox Prosight is improving hospital operations. Leveraging RTLS and Cox's Prosight Core^{SM} Internet of Things (IoT) platform, Cox Prosight provides hospital administrators and staff with advanced asset tracking, environmental monitoring, staff safety alerts and patient/visitor experience solutions.

Cox Prosight is already at work in the field with impactful results. Cox's longtime healthcare partner Ochsner Lafayette General has been using Cox Prosight for over six months, tracking 5,400 pieces of equipment, multiple staff members to ensure efficient operations.

Attendees of HIMSS22 from March 14-18 in Orlando will get to demo Cox Prosight's new hand hygiene monitoring capabilities, and explore Cox's growing healthcare portfolio of hospital to home including:

- **Cox Edge** is reshaping healthcare by placing compute resources and a full stack of cloud services right there at the edge, closer than ever to where data is created and patients are present, enabling the next generation of healthcare solutions and patient experience.
- **Cox Business Cloud Solutions** allows healthcare businesses to improve doctor-patient connections and enables secure data sharing, making it easier to integrate technology and applications while supporting compliance needs;
- and **Trapollo**, a connected health solution provider with a virtual healthcare platform that enables better patient care at home with flexible and extensible digital engagement tools, continuous patient monitoring, telehealth, and population health monitoring to connect clinicians, doctors, and patients. Trapollo also includes hardware, logistics and support services for a full end-to-end solution

"Healthcare no longer ends when a patient checks out. It's an ongoing relationship between provider and patient that's facilitated by next-gen technology. For a hospital to home care model to be successful, healthcare systems need to ensure their entire infrastructure – from connectivity to data management to remote patient monitoring – are working together to make it all happen," said George Valentine, executive director of new growth and development, Cox Communications. "That's why Cox is so unique in this space, we match deep healthcare experience with a suite of solutions that creates a unified experience."

To experience the full suite of Cox's hospital to home solutions at HIMSS22, book an in-person demo or visit booth #3520. Cox will also host an in-booth Happy Hour on Tuesday, March 15, from 3-5 p.m. ET.

About Cox Business
The commercial division of Cox Communications, Cox Business provides voice, data and video services for more than 355,000 small and regional businesses nationwide, including health care providers; K−12 and higher education; financial institutions; and federal, state and local government organizations. The organization also serves most of the top-tier wireless and wireline telecommunications carriers in the U.S. through its wholesale division. For more information, please visit www.coxbusiness.com.

About Cox Prosight
Cox Prosight is a secure extensible, IoT solution from Cox Communications that tracks and monitors assets, environments, and people to improve operational efficiency, staff safety, and clinical flows while engaging patients inside and outside of the hospital footprint.

Our end-to-end solution includes hardware, software, and services using BLE sensors and light-weight gateways to track the location of assets and people in real-time to improve the staff and patient experience.
